WALEED BIN KHALID

FRONTEND DEVELOPER

OBJECTIVE

As a front-end developer, I'm passionate about crafting appealing and user-friendly websites. I work well in teams to ensure our projects not only have a good design but also work smoothly. I'm eager to use my creativity and technical skills to take on exciting challenges in web development.

- Design interfaces that are user-friendly and responsive.
- Troubleshoot and resolve bugs and error messages in web apps
- Test web applications to ensure functionality and performance.

PROJECTS

Stickball

Multi Projects Application

It is a robust web application encompassing diverse projects tailored to meet the requirements of both businesses and individuals. I have focused on creating user-friendly designs that work well on different devices and seamlessly integrating APIs to enhance functionality.

Textopia

Text to Video generator

This web app turns text into fun videos, perfect for visual learners. Businesses make attractive ads, promos, and demos for customers. In education, it helps create instructional videos, making learning easier with visuals. It's user-friendly on any device, with added features for improvement.

Musketeers Tech

Portfolio Website

It is a company portfolio website. I built it using Next.js and Material-UI, ensuring it looks good on both large and small screens. I integrated APIs to fetch and post data. To improve its search engine optimization (SEO), I added meta tags, a sitemap, canonical tags, and schema markup.
